

Consists of a pale green moulded plastic block containing fifty rows of two "3-clip" terminals each terminal of which permits the connection of from one to three conductors (one in and two outs). Equipped with a fanning strip on one side of the block (part of moulded block) and an additional fanning strip mounted on the other side of the block.

Terminals are designed to permit incoming wiring to enter one side of block and outgoing wiring to leave at the other side.

Intended for terminating 19 through 26 gauge plastic insulated conductors on selected wire without removal of conductor insulation by means of an NE-714QA tool.

Initial use: NE-756 PBX.
