

Consists of a green moulded plastic block containing 50 rows of two "3-clip" quick-connect terminals, each terminal permits the connection of from one to three conductors. Equipped with a fanning strip on one side of the block (part of moulded block) and an additional fanning strip mounted on the other side of the block.

Intended for terminating 19 through 26 gauge plastic insulated conductors on selected wire without removal of conductor insulation by means of an NE-714 QA tool.

Initial use: On QBA1 type backboards for centralized key telephone installations.
