NO. 201A ALARM DETECTOR

A.T.&T.CO.
STANDARD

Consists of a printed wiring board assembly, a 9-volt battery, and other component apparatus in a rectangular plastic housing. This unit is equipped with a pocket clip and a lanyard assembly for carrying purposes.

Equipped with a sliding switch which when activated causes the detector to transmit a frequency signal to the No. 101A alarm reporting dialer, a unit that dials two predetermined telephone numbers and gives a voice-synthesized message.

When a transmitter low battery condition exists, the transmitter will make an audible beeping sound once every minute and the No. 101A alarm reporting dialer will speak the word battery once every minute.

Overall dimensions are approximately 5.390 inches high by 1.510 inches wide by 1.130 inches thick including the clip.

Initial use: Emergency Call System — Medical Transmitter.

Comcode: 103 803 391
